Manganese (Manganous sulphate monohydrate/3b503)	40mg/kg
Zinc (Zinc sulphate monohydrate/3b605)	40mg/kg
Selenium (Sodium selenite/3b801)	0.25mg/kg

## **Equilac Composition**

Skim milk powder, fat filled skim milk powder, whey powder, fat filled whey powder, dextrose.

#### Uses

Equilac Mare's Milk Replacer can be used for hand rearing, supplementary feeding or automatic machine feeding.

## **Hand Rearing**

If a foal is orphaned or the mare has no milk, Equilac mares milk Replacer is suitable to feed from one day old up to weaning. Equilac provides calories, protein, vitamins and minerals to support the growing foal.

Equilac is not a source of colostrum. It is vital that colostrum is consumed as the primary source of milk within the first 12-14 hours of birth.

### **Supplementary Feeding**

When a mare has insufficient milk, which can frequently happen at the start of lactation, Equilac Milk Replacer should be fed as a milk supplement.

### **Feeding Rate**

Equilac mixes instantly in warm water (130g per litre) - add the milk powder to the water and whisk. Equilac should be fed at 37-38 °C do not reheat.

For complete accuracy weigh Equilac before mixing. These instructions should be used as a guide only, adjusting the quantity fed according to bodyweight and condition.

For further detailed feeding instructions please contact us via helplineenquiries@dodsonandhorrell.com

For equine use only. A small amount of blue specs in Equilac should be expected and is perfectly normal, due to the inclusion of a bioavailable source of copper.

Mineral values for Equilac are total values within the product including added and naturally occurring minerals from grains, fibres and other raw materials. Such materials are naturally variable and as such total values may vary slightly.
